PROFESSIONAL SUMMARY

MSc Environmental Science graduate (2024–2026) with project experience in ESG data analysis, materiality assessment, and GIS-based environmental research. Applied BRSR-aligned ESG frameworks to real corporate sustainability disclosures and independently led a field-based GIS research project mapping noise pollution against CPCB standards across 36 locations in Delhi. Proficient in Excel, QGIS, and Power BI basics. Seeking entry-level ESG/Sustainability Analyst or Environmental Data roles.

EDUCATION

MSc Environmental Science — Jamia Millia Islamia, New Delhi | Jul 2024 – May 2026

Dissertation: "Noise Pollution Mapping in Thickly Populated Clusters of Delhi Using GIS and Field-Based Noise Monitoring" (Supervisor: Dr. Sirajuddin Ahmed, Dept. of Environmental Sciences)

BSc Environmental Chemistry — Maharaja's College, Kochi, Kerala | 2021 – 2024

CORE SKILLS

- Frameworks & Standards: BRSR, BRSR Core, GRI, ESG Materiality Assessment, IFRS Sustainability Disclosure Standards, Environmental Impact Assessment (basics)
- Tools & Software: Excel (dashboards, pivot tables), QGIS (spatial mapping & analysis), Power BI (basics)
- Analytical Skills: ESG Data Collection & Analysis, GHG Emissions Data Interpretation, Environmental Field Monitoring, CPCB Standards Benchmarking, Spatial & Statistical Analysis

PROJECTS

Noise Pollution Mapping Using GIS and Field-Based Monitoring — MSc Dissertation | 2025–2026

- Measured Lmax, Lmin, and Leq noise levels across 36 locations in Delhi at 6 time periods per site (working-day morning rush, evening rush, and midnight; Sunday morning, evening, and midnight) — 200+ individual readings capturing day-vs-night and weekday-vs-holiday variation.
- Compiled and structured the dataset in Excel, then mapped spatial and temporal noise distribution in QGIS across residential, commercial, and silence zones.
- Benchmarked results against CPCB ambient noise standards to identify non-compliant hotspots; investigated underlying causes (traffic density, land use, zoning gaps) through literature review.
- Produced comparative noise-contour maps (day vs. night, working day vs. holiday) to support evidence-based noise-zoning recommendations.

ESG & Environmental Performance Dashboard — Academic Case Study (Infosys, public disclosure data) | 2025

- Analyzed Infosys's publicly disclosed ESG data (FY2023–FY2025) covering GHG emissions, renewable energy usage, water consumption, and waste generation.
- Built an Excel-based ESG dashboard tracking total GHG emissions (226,701 tCO2e in FY25, down from FY23), renewable energy share (40.6%), water usage (4.1 Mn m³), and waste generated (37,518 t).
- Derived an overall environmental performance score (84/100) and summarized year-on-year trends.

ESG Materiality & Risk-Opportunity Assessment — Academic Case Study (Tata Steel, public disclosure data) | 2025

- Assessed material ESG issues using stakeholder-importance and business-impact criteria based on Tata Steel's public sustainability disclosures.
- Built an ESG risk–opportunity matrix evaluating exposure to energy consumption, emissions, and regulatory risk factors.
- Applied standard ESG materiality frameworks to prioritize key sustainability issues.
